Static and quasi-static resistance (for a single anchor)

All data in this section applies to:

- Correct setting (See setting instruction)
 - No edge distance and spacing influence
 - Steel failure
 - Minimum base material thickness
 - Embedment depth, as specified in the table
 - Anchor material, as specified in the tables
 - Concrete C 20/25
 - in-service temperature range I
(min. base material temp. -40°C, max. long/short term base material temp.: +24°C/40°C)
 - Short term loading. For long term loading please apply $\psi_{\text{sus}} = 0.74^{\text{b)}$
- b) HIT-Z and HAS-D are suitable for permanent loading without any load reduction. ψ_{sus} is not considered for this element.

For hammer drilled holes, hammer drilled holes with Hilti hollow drill bit:

Seismic resistance (for a single anchor)

All data in this section applies to:

- Correct setting (See setting instruction with hammer drilling)
- No edge distance and spacing influence
- Steel failure
- Minimum base material thickness
- Concrete C 20/25
- Temperature range I (min. base material temp. -40°C, max. long/short term base material temp.: +24°C/40°C)
- Installation temperature range -10°C to +40°C (for HAS-U) or +5°C to +40°C (for HIT-Z)
- $\alpha_{\text{gap}} = 1,0$ (using Hilti seismic filling set) or $\alpha_{\text{gap}} = 0,5$ (without using Hilti seismic filling set) accordingly

For hammer drilled holes and hammer drilled holes with Hilti hollow drill bit:

Setting information

Installation temperature:

- -10 °C to +40 °C (for HAS-U, HAS-D, HIS-N)
- +5 °C to +40 °C (for HIT-Z, HIT-Z-D)

In service temperature range

Hilti HIT-HY 200 A (R) injection mortar may be applied in the temperature ranges given below. An elevated base material temperature leads to a reduction of the design bond resistance.

Temperature in the base material

Temperature range	Base material temperature	Maximum long term base material temperature	Maximum short term base material temperature
Temperature range I	-40 °C to +40 °C	+24 °C	+40 °C
Temperature range II	-40 °C to +80 °C	+50 °C	+80 °C
Temperature range III	-40 °C to +120 °C	+72 °C	+120 °C

Maximum short term base material temperature

Short-term elevated base material temperatures are those that occur over brief intervals, e.g. as a result of diurnal cycling.

Maximum long term base material temperature

Long-term elevated base material temperatures are roughly constant over significant periods of time.

Minimum edge distance and spacing – Explanation

Minimum edge and spacing geometrical requirements are determined by testing the installation conditions in which two anchors with a given spacing can be set close to an edge without forming a crack in the concrete due to tightening torque.

The HIT-Z boundary conditions for edge and spacing geometry can be found in the tables to the left. If the embedment depth and slab thickness are equal to or greater than the values in the table, then the edge and spacing values may be utilized.

PROFIS Anchor software is programmed to calculate the referenced equations in order to determine the optimized related minimum edge and spacing based on the following variables:

<u>Cracked or non-cracked concrete</u>	For cracked concrete it is assumed that a reinforcement is present which limits the crack width to 0,3 mm, allowing smaller values for minimum edge distance and minimum spacing
<u>Anchor diameter</u>	For smaller anchor diameter a smaller installation torque is required, allowing smaller values for minimum edge distance and minimum spacing
<u>Slab thickness and embedment depth</u>	Increasing these values allows smaller values for minimum edge distance and minimum spacing

Installation temperature range

- 10°C to + 40°C

Service temperature range

Hilti HIT-HY 200 injection mortar may be applied in the temperature ranges given below, An elevated base material temperature may lead to a reduction of the design bond resistance,

Temperature range	Base material temperature	Maximum long term base material temperature	Maximum short term base material temperature
Temperature range I	-40 °C to + 40 °C	+ 24 °C	+ 40 °C
Temperature range II	-40 °C to + 80 °C	+ 50 °C	+ 80 °C
Temperature range III	-40 °C to + 120 °C	+ 72 °C	+ 120 °C

Maximum short term base material temperature

Short term elevated base material temperatures are those that occur over brief intervals, e.g, as a result of diurnal cycling,

Maximum long term base material temperature

Long term elevated base material temperatures are roughly constant over significant periods of time,

Review the Material Safety Data Sheet (MSDS) before use for proper and safe handling! Wear well-fitting protective goggles and protective gloves when working with Hilti HIT-HY 200.

Drilling

Hammer drilled hole (HD)

Hammer drilled hole with Hollow Drilled Bit (HDB)

No cleaning required

Diamond Drilling + Roughening Tool (DD+RT)

Cleaning (Inadequate hole cleaning = poor load values.)

Hammer drilling:

Manual cleaning (MC)

for drill diameters $d_0 \leq 20$ mm and drill hole depth $h_0 \leq 10 \cdot d_0$.

Hammer drilling:

Compressed air cleaning (CAC)

for all drill hole diameters d_0 and drill hole depths $h_0 \leq 20 \cdot d_0$.

Diamond cored holes with Hilti roughening tool:

For all drill hole diameters d_0 and drill hole depths h_0 .

Injection system preparation

Injection system preparation.

Injection method for drill hole depth $h_{ef} \leq 250$ mm.

Injection method for overhead application and/or installations with embedment depth $h_{ef} \geq 250$ mm.

Rebar
($\phi 8 - \phi 32$)

Benefits

- **SafeSet** technology: Simplified method of borehole preparation using either Hilti hollow drill bit for hammer drilling or Roughening tool for diamond cored applications
- HY 200-R version is formulated for best handling and cure time specifically for rebar applications
- Approved for ETA seismic C1 approval for post-installed-rebar
- Suitable for concrete C 12/15 to C 50/60
- Suitable for dry and water saturated concrete
- For rebar diameters up to 32 mm
- Non corrosive to rebar elements
- Good load capacity at elevated temperatures
- Suitable for embedment length up to 1000 mm
- Suitable for applications down to -10 °C
- Two mortar versions: HY 200-A for slow cure applications and HY 200-R for fast cure applications

Steel failure

b) Overlap joint application

Max. bond stress, $f_{bd, FIRE}$, depending on actual clear concrete cover for classifying the fire resistance.

It must be verified that the actual force in the bar during a fire, $F_{s,T}$, can be taken up by the bar connection of the selected length, l_{inst} . Note: Cold design for ULS is mandatory.

$$F_{s,T} \leq (l_{inst} - c_f) \cdot \phi \cdot \pi \cdot f_{bd, FIRE} \quad \text{where: } (l_{inst} - c_f) \geq l_s;$$

l_s = lap length

ϕ = nominal diameter of bar

$l_{inst} - c_f$ = selected overlap joint length; this must be at least l_s ,

but may not be assumed to be more than 80ϕ

$f_{bd, FIRE}$ = bond stress when exposed to fire

Critical temperature-dependent bond stress, τ_c , concerning “overlap joint” for Hilti HIT-HY 200 injection adhesive in relation to fire resistance class and required minimum concrete coverage c.

Fitness for use

Some creep tests have been conducted in accordance with ETAG guideline 001 part 5 and TR 023 in the following conditions: **in dry environment at 50 °C during 90 days.**

These tests show an excellent behaviour of the post-installed connection made with HIT-HY 200: low displacements with long term stability, failure load after exposure above reference load.

Electrical Conductivity

HIT-HY 200 in the hardened state **is not conductive electrically**. Its electric resistivity is $15,5 \cdot 10^9 \Omega \cdot \text{cm}$ (DIN IEC 93 – 12.93). It is adapted well to realize electrically insulating anchoring (ex: railway applications, subway).

Setting information

Installation temperature range

-10°C to +40°C

Service temperature range

Hilti HIT-HY 200 injection mortar may be applied in the temperature ranges given below. An elevated base material temperature may lead to a reduction of the design bond resistance.

Temperature range	Base material temperature	Maximum long term base material temperature	Maximum short term base material temperature
Temperature range I	-40 °C to +80 °C	+50 °C	+80 °C

Maximum short term base material temperature

Short-term elevated base material temperatures are those that occur over brief intervals, e.g. as a result of diurnal cycling.

Maximum long term base material temperature

Long-term elevated base material temperatures are roughly constant over significant periods of time.

Setting instructions

*For detailed information on installation see instruction for use given with the package of the product.

Safety regulations.

Review the Material Safety Data Sheet (MSDS) before use for proper and safe handling! Wear well-fitting protective goggles and protective gloves when working with Hilti HIT-HY 200.

Drilling

Hammer drilled hole (HD)

Hammer drilled hole with Hollow Drilled Bit (HDB)

No cleaning required

Diamond Drilling + Roughening Tool (DD+RT)

Cleaning

Hammer drilling:

Manual cleaning (MC)

for drill diameters $d_0 \leq 20$ mm and drill hole depth $h_0 \leq 10 \cdot d$.

Hammer drilling:

Compressed air cleaning (CAC)

for all drill hole diameters d_0 and drill hole depths $h_0 \leq 20 \cdot d$.

Diamond cored holes with Hilti roughening tool:

For all drill hole diameters d_0 and drill hole depths h_0 .
