Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such. Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific Part

1 Technical description of the product

The HILTI HDA anchor in the range of M10 to M20 is a self-cutting undercut anchor made of galvanised steel. The HILTI HDA-R anchor in the range of M10 to M16 is a self-cutting undercut anchor made of stainless steel. Both are available as pre-setting (HDA-P and HDA-PR version) and as through-fastening anchor (HDA-T and HDA-TR version). They are placed into a hole drilled with a special stop drill bit and self-cutting undercut using a special setting tool. The nut is torque tightened to complete the fastening of the fixture.

The illustration and the description of the product are given in Annexes A.

2 Specification of the intended use

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annexes B.

The provisions made in this European technical assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic tension resistance in case of static and quasi-static loading according ETAG001, Annex C	See Annex C1 and Annex C2
Characteristic tension resistance in case of static and quasi-static loading according CEN/TS 1992-4	See Annex C3 and Annex C4
Displacements under tension loads in case of static and quasi-static loading	See Annex C5
Characteristic shear resistance in case of static and quasi-static loading according ETAG001, Annex C	See Annex C6 and Annex C7
Characteristic shear resistance in case of static and quasi-static loading according CEN/TS 1992-4	See Annex C8 and Annex C9
Displacements under shear loads in case of static and quasi-static loading	See Annex C10
Characteristic tension resistance in case of seismic performance category C1 according EOTA TR045	See Annex C11 and Annex C12
Displacements under tension loads in case of seismic performance category C1	See Annex C11 and Annex C12
Characteristic shear resistance in case of seismic performance category C1 according EOTA TR045	See Annex C13 and Annex C14
Displacements under shear loads in case of seismic performance category C1	See Annex C13 and Annex C14
Characteristic tension resistance in case of seismic performance category C2 according EOTA TR045	See Annex C15 and Annex C16
Displacements under tension loads in case of seismic performance category C2	See Annex C15 and Annex C16
Characteristic shear resistance in case of seismic performance category C2 according EOTA TR045	See Annex C17 and Annex C18
Displacements under shear loads in case of seismic performance category C2	See Annex C17 and Annex C18

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances contained in this European technical approval, there may be requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Directive, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

For Basic requirement Safety in use the same criteria are valid as for Basic Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not relevant.

3.6 Energy economy and heat retention (BWR 6)

Not relevant.

3.7 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was determined for this product.

3.8 General aspects relating to fitness for use

Durability and Serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

4 Assessment and verification of constancy of performance (AVCP)

According to the Decision 96/582/EC of the European Commission¹, as amended, the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or Class	System
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units	—	1

5 Technical details necessary for the implementation of the AVCP system

Technical details necessary for the implementation of the Assessment and verification of constancy of performance (AVCP) system are laid down in the control plan deposited at Centre Scientifique et Technique du Bâtiment.

The manufacturer shall, on the basis of a contract, involve a notified body approved in the field of anchors for issuing the certificate of conformity CE based on the control plan.

Pre-setting anchor HDA-P and HDA-PR (Prepositioning)

Pre-setting anchor HDA-P and HDA-PR (Prepositioning)

Intended use:

HDA-P for use in cracked or non-cracked concrete in dry internal conditions only

HDA-PR for use in cracked or non-cracked concrete (any conditions but very aggressive)

Self-cutting undercut anchor HDA and HDA-R

Product description – Installation condition

HDA-P and HDA-PR

Annex A1

Through-fastening anchor HDA-T and HDA-TR (Postpositioning)

Through-fastening anchor HDA-T and HDA-TR (Postpositioning)

Intended use:

HDA-T for use in cracked or non-cracked concrete in dry internal conditions only

HDA-TR for use in cracked or non-cracked concrete (any conditions but very aggressive)

Self-cutting undercut anchor HDA and HDA-R

Product description – Installation condition

HDA-T and HDA-TR

Annex A2

Through-fastening anchor HDA-T and HDA-TR with centering washer (Postpositioning)

Through-fastening anchor HDA-T and HDA-TR with centering washer (Postpositioning)

The maximum fastenable thickness $t_{fix,max}$ (see Table 4, Annex B7) is kept if following equation is fulfilled: $t_{fix,max} \geq t_{fix} + t_{cw}$

with:

- t_{fix} ... thickness of the fixture
- t_{cw} ... thickness of the centering washer (5mm for all sizes)

Note: The centering washer must be used for the drilling of the hole to ensure the proper embedment depth.

Self-cutting undercut anchor HDA and HDA-R

Product description – Installation condition

HDA-T and HDA-TR with centering washer

Annex A3

Pre-setting anchor HDA-P and HDA-PR (Prepositioning)

Through-fastening anchor HDA-T and HDA-TR (Postpositioning)

Through-fastening anchor HDA-T and HDA-TR with centering washer (Postpositioning)

Self-cutting undercut anchor HDA and HDA-R

Product description - Material of anchor

Table 1a: Materials HDA-P and HDA-T

Part	Designation	HDA-P / HDA-T (galvanized $\geq 5\mu\text{m}$)
1	Sleeve	Machined carbon steel with brazed tungsten carbide tips
2	Bolt	M10 - M16: Cold formed steel, steel strength 8.8 M20: Cone machined, rod steel strength 8.8
3	Coating of bolt and sleeve	Galvanized 5-25 μm
4	Hexagon nut	M10 - M16: Class 8, $h=1*d$, galvanized M20: Class 8, galvanized
5	Washer	M10 - M16: Spring washer, galvanized or coated M20: Washer, galvanized
6	Cutting edges	Tungsten carbide
7	Ring	Plastic ring
8	Cap	Plastic cap
9	Centering washer	Machined steel

Table 1b: Materials HDA-PR and HDA-TR

Part	Designation	HDA-PR / HDA-TR
1	Sleeve	Machined stainless steel 1.4401, 1.4404, or 1.4571 with brazed tungsten carbide tips
2	Bolt	Rod: machined stainless steel 1.4401, 1.4404 or 1.4571 Cone: machined stainless steel 1.4401, 1.4404 or 1.4571
3	Coating of cone	Hardchrome > 10 μm
4	Hexagon nut	Grade A4-80, $h=1*d$
5	Washer	Spring washer stainless steel
6	Cutting edges	Tungsten carbide
7	Ring	Plastic ring
8	Cap	Plastic cap
9	Centering washer	Machined stainless steel, 1.4401

Self-cutting undercut anchor HDA and HDA-R

Product description - Material of anchor

HDA-P, HDA-PR, HDA-T and HDA-TR

Annex A5

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loading
- Seismic actions for Performance Category C1 and Performance Category C2

Base materials:

- Reinforced or unreinforced normal weight concrete of strength classes C 20/25 at least to C50/60 at most according to EN 206: 2000-12.
- Cracked concrete and non-cracked concrete

Use conditions (Environmental conditions):

- The HDA-P and HDA-T anchors may only be used in concrete subject to dry internal conditions.
- The HDA-PR and HDA-TR anchors may be used in concrete subject to dry internal conditions and also in concrete subject to external atmospheric exposure (including industrial and marine environment), or exposure in permanently damp internal conditions, if no particular aggressive conditions exist.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages are designed in accordance with the ETAG001 Annex C "Design Method for Anchorages" or CEN/TS 1992-4-4 "Design of fastenings for use in concrete" under the responsibility of an engineer experienced in anchorages and concrete work.
- For seismic application the anchorages are designed in accordance with EOTA TR045 "Design of Metal Anchors For Use In Concrete Under Seismic Actions".
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings.

Self-cutting undercut anchor HDA and HDA-R

Intended use
Specifications

Annex B1

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Use of the anchor only as supplied by the manufacturer without exchanging the components of an anchor.
- Anchor installation in accordance with the manufacturer's specifications and drawings and using the appropriate tools (hammer drill, setting tool, stop drill bit, centering washer if needed).
- Thickness of the fixture corresponding to the range of required thickness values for the type of anchor.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply.
- Check of concrete being well compacted, e.g. without significant voids
- Cleaning the hole of drilling dust
- Anchor installation ensuring the specified embedment depth using a special required stop drill bit
- Anchor installation ensuring complete expansion of the sleeve with checking that the non-threaded coloured ring marking on the bolt is visible above the top edge of the anchor sleeve; therefore it is required using the special setting tool, that is the appropriate depth ring marking of the setting tool at least flush with the concrete surface (pre-setting) respecting with the fixture surface (through-fastening).
- Anchor installation ensuring complete shear load capacity, the recess of the top edge of the sleeve respecting with the concrete surface (pre-setting) or with surface of the fixture (through-fastening) has to be in the specified range according to Annex B9; the use of a centering washer (see Annex A3) ensures the shear load capacity for HDA-T anchors with the minimum fixture thickness according Annex C6 and/or Annex C7.
- Keeping of the edge distance and spacing to the specified values without minus tolerances.
- Positioning of the drill holes and the undercut without damaging the reinforcement.
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength mortar and no shear or oblique tension loads in the direction of aborted hole.
- Application of the torque moment given in Annex B9 using a calibrated torque wrench.

b) Through-fastening anchor HDA-T(R):

distance from top edge of the fixture to top edge of the anchor sleeve, see Annex A2 and Annex A3

Self-cutting undercut anchor HDA and HDA-R

Installation data

HDA-P, HDA-PR, HDA-T and HDA-TR

Annex B9

Table 7a: Minimum thickness of concrete member, HDA-P and HDA-PR

Anchor type		HDA-P M10 HDA-PR M10	HDA-P M12 HDA-PR M12	HDA-P M16 HDA-PR M16	HDA-P M20 HDA-PR M20
Minimum thickness of concrete member	h_{min} [mm]	180	200	270	350

Table 7b: Minimum thickness of concrete member, HDA-T and HDA-TR

Anchor type		HDA-T M10 HDA-TR M10	HDA-T M12 HDA-TR M12	HDA-T M16 HDA-TR M16	HDA-T M20
Maximum fastenable thickness	$t_{fix,max}^{1)}$ [mm]	20	30	40	50
Minimum thickness of concrete member	$h_{min}^{2)}$ [mm]	$200 - t_{fix}$	$230 - t_{fix}$	$310 - t_{fix}$	$400 - t_{fix}$

¹⁾ $t_{fix,max}$ maximum fastenable thickness, see Table 4, Annex B7

²⁾ h_{min} is dependent on the actual fixture thickness t_{fix} (use of a stop drill bit)

e.g. HDA-T 22-M12x125/50: $t_{fix} = 20\text{mm} \rightarrow h_{min} = 250 - 20 = 230\text{mm}$

$t_{fix} = 50\text{mm} \rightarrow h_{min} = 250 - 50 = 200\text{mm}$

Table 8: Minimum spacing and minimum edge distances of anchors

HDA-P(R) / HDA-T(R)		M10	M12	M16	M20
Cracked concrete					
Minimum spacing ¹⁾	s_{min} [mm]	100	125	190	250
Minimum edge distance ²⁾	c_{min} [mm]	80	100	150	200
Non-cracked concrete					
Minimum spacing ¹⁾	s_{min} [mm]	100	125	190	250
Minimum edge distance ²⁾	c_{min} [mm]	80	100	150	200

¹⁾ ratio $s_{min} / h_{ef} = 1,0$

²⁾ ratio $c_{min} / h_{ef} = 0,8$

HDA-P / HDA-T		M10	M12	M16	M20
Steel failure					
Characteristic resistance	$N_{Rk,s}$ [kN]	46	67	126	192
Partial safety factor	$\gamma_{Ms}^{1)}$	1,5			
Pull-out failure²⁾					
Characteristic resistance in cracked concrete only C20/25	$N_{Rk,p}$ [kN]	25	35	75	95
Partial safety factor in cracked concrete only	$\gamma_{Mp}^{1)}$	1,5 ³⁾			
Increasing factors for $N_{Rk,p}$ for cracked concrete only	ψ_c C30/37	1,22			
	C40/50	1,41			
	C50/60	1,55			
Concrete cone failure and splitting failure⁴⁾					
Effective anchorage depth	h_{ef} [mm]	100	125	190	250
Partial safety factor in cracked and non-cracked concrete	$\gamma_{Mc}^{1)}$	1,5 ³⁾			
Spacing	$s_{cr,N}$ [mm]	300	375	570	750
Edge distance	$c_{cr,N}$ [mm]	150	190	285	375
Spacing	$s_{cr,sp}$ [mm]	300	375	570	750
Edge distance	$c_{cr,sp}$ [mm]	150	190	285	375

¹⁾ In absence of national regulations.

²⁾ The pull-out failure mode is not decisive in non-cracked concrete; it does not have to be calculated by the designer.

³⁾ Partial safety factor $\gamma_2 = 1,0$ is included.

⁴⁾ For concrete cone failure, the initial value of the characteristic resistance of an HDA anchor placed in cracked or non-cracked concrete is obtained by: $N_{Rk,c}^0 = k_1 \cdot \sqrt{f_{ck,cube}} \cdot h_{ef}^{1,5}$

with $k_1 = 8,3$ for applications in cracked concrete

$k_1 = 11,6$ for applications in non-cracked concrete

instead of the factors k_1 given in equation (5.2a) in ETAG 001 Annex C, § 5.2.2.4.

The definition of seismic performance category C2 is given in Annex C19.

Self-cutting undercut anchor HDA and HDA-R

Design - Seismic Category C2 (EOTA TR045) - shear loads
HDA-PR and HDA-TR

Annex C18

Table 21: Recommended seismic performance categories for anchors ¹⁾

Seismicity level ^a		Importance Class acc. to EN 1998-1:2004, 4.2.5			
Class	$a_g \cdot S^c$	I	II	III	IV
Very low ^b	$a_g \cdot S \leq 0,05 \text{ g}$	No additional requirement			
Low ^b	$0,05 \text{ g} < a_g \cdot S \leq 0,1 \text{ g}$	C1	C1 ^d or C2 ^e		C2
> low	$a_g \cdot S > 0,1 \text{ g}$	C1	C2		
^a The values defining the seismicity levels are may be found in the National Annex of EN 1988-1.					
^b Definition according to EN 1998-1, 3.2.1.					
^c a_g = Design ground acceleration on Type A ground (EN 1998-1, 3.2.1), S = Soil factor (see e.g. EN 1998-1, 3.2.2).					
^d C1 for attachments of non-structural elements					
^e C2 for connections between structural elements of primary and/or secondary seismic members					

¹⁾ The seismic performance of anchors subjected to seismic loading is categorized by performance categories C1 and C2. The assessment is carried out according to ETAG 001, Annex E.

Table 21 relates the seismic performance categories C1 and C2 to the seismicity level and building importance class. The level of seismicity is defined as a function of the product $a_g \cdot S$, where a_g is the design ground acceleration on Type A ground and S the soil factor, both in accordance with EN 1998-1: 2004.

The value of a_g or that of the product $a_g \cdot S$ used in a Member State to define thresholds for the seismicity classes may be found in its National Annex of EN 1998-1 and may be different to the values given in Table 18. Furthermore, the assignment of the seismic performance categories C1 and C2 to the seismicity level and building importance classes is in the responsibility of each individual Member State.

Self-cutting undercut anchor HDA and HDA-R

Recommended seismic performance categories for anchors
HDA-P, HDA-PR, HDA-T and HDA-TR

Annex C19

Table 22: Reduction factor α_{seis}

Loading	Failure mode	Single anchor ¹⁾	Anchor group
tension	Steel failure	1,0	1,0
	Pull-out failure	1,0	0,85
	Concrete cone failure	1,0	0,85
	Splitting failure	1,0	0,85
shear	Steel failure	1,0	0,85
	Concrete edge failure	1,0	0,85
	Concrete pry-out failure	1,0	0,85

¹⁾ In case of tension loading single anchor also addresses situations where only 1 anchor in a group of anchor is subjected to tension.

For every failure mode the characteristic seismic resistance $R_{k,\text{seis}}$ of a fastening shall be determined as follows:

$$R_{k,\text{seis}} = \alpha_{\text{gap}} \cdot \alpha_{\text{seis}} \cdot R_{k,\text{seis}}^0$$

where

α_{gap} reduction factor to take into account inertia effects due to an annular gap between anchor and fixture in case of shear loading;

= 1,0 in case of no hole clearance between anchor and fixture;

= 0,5 in case of connections with standard hole clearance according ETAG 001, Annex C, Table 4.1

α_{seis} reduction factor to take into account the influence of large cracks and scatter of load displacement curves, see Table 22;

$R_{k,\text{seis}}^0$ basic characteristic seismic resistance for a given failure mode:

For steel and pullout failure under tension load and steel failure under shear load $R_{k,\text{seis}}^0$ (i.e. $N_{Rk,s,\text{seis}}$, $N_{Rk,p,\text{seis}}$, $V_{Rk,s,\text{seis}}$) shall be taken from Annexes C11, C12, C13 and C14 (in case of seismic performance category C1) and from Annexes C15, C16, C17 and C18 (in case of seismic performance category C2).

For all other failure modes $R_{k,\text{seis}}^0$ shall be determined as for the design situation for static and quasi-static loading according to ETAG 001, Annex C or CEN/TS 1992-4 (i.e. $N_{Rk,c}$, $N_{Rk,sp}$, $V_{Rk,c}$, $V_{Rk,cp}$).

Self-cutting undercut anchor HDA and HDA-R

Reduction factors and characteristic seismic performance

HDA-P, HDA-PR, HDA-T and HDA-TR

Annex C20
