**Specifier's comments:**

**1 Input data**

<b>Anchor type and diameter:</b>	<b>HY 270 + threaded rod 5.8 3/4</b>	
Item number:	385432 HAS 5.8 3/4"x10" (element) / 2194247 HIT-HY 270 (adhesive)	
Effective embedment depth:	$h_{ef} = 6.750$ in.	
Material:	5.8	
Evaluation Service Report:	ESR-4143	
Issued   Valid:	3/1/2021   1/1/2022	
Proof:	Design Method ASD Masonry	
Stand-off installation:	$e_b = 0.000$ in. (no stand-off); $t = 0.400$ in.	
Anchor plate <sup>R</sup> :	$l_x \times l_y \times t = 40.000$ in. x $20.000$ in. x $0.400$ in.; (Recommended plate thickness: not calculated)	
Profile:	Square HSS (AISC), HSS4X4X.25; (L x W x T) = $4.000$ in. x $4.000$ in. x $0.250$ in.	
Base material:	Grout-filled CMU, L x W x H: $16.000$ in. x $8.000$ in. x $8.000$ in.;	
	Joints: vertical: $0.375$ in.; horizontal: $0.375$ in.	
	Base material temperature: $68$ °F	
Installation:	Face installation	
Seismic loads	no	

<sup>R</sup> - The anchor calculation is based on a rigid anchor plate assumption.

## 2 Load case/Resulting anchor forces

Load case: Service loads

### Anchor reactions [lb]

Tension force: (+Tension, -Compression)

Anchor	Tension force	Shear force	Shear force x	Shear force y
1	167	0	0	0
2	167	0	0	0
3	167	0	0	0
4	167	0	0	0
5	167	0	0	0
6	167	0	0	0

max. compressive strain: - [%]  
 max. compressive stress: - [psi]  
 resulting tension force in (x/y)=(0.000/0.000): 1,000 [lb]  
 resulting compression force in (x/y)=(0.000/0.000): 0 [lb]

Anchor forces are calculated based on the assumption of a rigid anchor plate.

### 3 Tension load (Most utilized anchor 1)

	Load $P_s$ [lb]	Capacity $P_t$ [lb]	Utilization $\beta_p = P_s/P_t$ [%]	Status
Steel strength	167	10,570	2	OK
Bond strength	167	1,456	12	OK

#### 3.1 Steel strength

$P_{t,s}$  = ESR Value refer to ICC-ES ESR-4143

$$P_{t,s} \geq P_s$$

Results

$P_{t,s}$ [lb]	$P_s$ [lb]
10,570	167

#### 3.2 Bond strength

$P_{t,b,Base}$  = ESR Value refer to ICC-ES ESR-4143

$$P_{t,b} = P_{t,b,Base} \cdot f_{red,E} \cdot f_{red,s} \cdot f_{red,Temp} \cdot f_{red,Bedjoint}$$

$$P_{t,b} \geq P_s$$

Variables

$c_{min}$ [in.]	$c_{cr}$ [in.]	$s_{min}$ [in.]	$s_{cr}$ [in.]	Temperature [°F]
4.000	20.000	4.000	27.000	68

Results

$P_{t,b}$ [lb]	$P_{t,b,Base}$ [lb]	$P_s$ [lb]	$f_{red,E}$	$f_{red,S}$	$f_{red,Temp}$	$f_{red,Bedjoint}$
1,456	3,810	167	0.660	0.579	1.000	1.000

### 4 Shear load (Most utilized anchor 1)

	Load $V_s$ [lb]	Capacity $V_t$ [lb]	Utilization $\beta_v = V_s/V_t$ [%]	Status
Overall strength	N/A	N/A	N/A	N/A

### 5 Warnings

- The anchor design methods in PROFIS Engineering require rigid anchor plates per current regulations (AS 5216:2021, ETAG 001/Annex C, EOTA TR029 etc.). This means load re-distribution on the anchors due to elastic deformations of the anchor plate are not considered - the anchor plate is assumed to be sufficiently stiff, in order not to be deformed when subjected to the design loading. PROFIS Engineering calculates the minimum required anchor plate thickness with CBFEM to limit the stress of the anchor plate based on the assumptions explained above. The proof if the rigid anchor plate assumption is valid is not carried out by PROFIS Engineering. Input data and results must be checked for agreement with the existing conditions and for plausibility!
- Refer to the manufacturer's product literature for cleaning and installation instructions.
- For additional information about ACI 318 strength design provisions, please go to <https://submittals.us.hilti.com/PROFISAnchorDesignGuide/>
- The min. sizes of the bricks, the masonry compressive strength, the type / strength of the mortar and the grout (in case of fully grouted CMU walls) has to fulfill the requirements given in the relevant ESR-approval or in the PTG.
- Only the local load transfer from the anchor(s) to the wall is considered, a further load transfer in the wall is not covered by PROFIS!
- Wall is assumed as being perfectly aligned vertically – checking required(!): Noncompliance can lead to significantly different distribution of forces and higher tension loads than those calculated by PROFIS. Masonry wall must not have any damages (neither visible nor not visible)! While installation, the positioning of the anchors needs to be maintained as in the design phase i.e. either relative to the brick or relative to the mortar joints.
- The effect of the joints on the compressive stress distribution on the plate / bricks was not taken into consideration.
- If no significant resistance is felt over the entire depth of the hole when drilling (e.g. in unfilled butt joints), the anchor should not be set at this position or the area should be assessed and reinforced. Hilti recommends the anchoring in masonry always with sieve sleeve. Anchors can only be installed without sieve sleeves in solid bricks when it is guaranteed that it has not any hole or void.
- The accessories and installation remarks listed on this report are for the information of the user only. In any case, the instructions for use provided with the product have to be followed to ensure a proper installation.
- The compliance with current standards (e.g. 2018, 2015, 2012, 2009 and 2006 IBC) is the responsibility of the user.
- Drilling method (hammer, rotary) to be in accordance with the approval!
- Masonry needs to be built in a regular way in accordance with state-of the art guidelines!
- Warnings/Notes - OST in Masonry HNA!

**Fastening meets the design criteria!**

### 6 Installation data

Profile: Square HSS (AISC), HSS4X4X.25; (L x W x T) = 4.000 in. x 4.000 in. x 0.250 in.

Hole diameter in the fixture:  $d_f = 0.812$  in.

Plate thickness (input): 0.400 in.

Drilling method: Drilled in hammer mode

Anchor type and diameter: HY 270 + threaded rod 5.8 3/4  
 Item number: 385432 HAS 5.8 3/4"x10" (element) / 2194247 HIT-HY 270 (adhesive)

Maximum installation torque: 120 in.lb

Hole diameter in the base material: 0.875 in.

Hole depth in the base material: 6.750 in.

Minimum thickness of the base material: 7.625 in.

Hilti HIT-V threaded rod with HIT-HY 270 injection mortar with 6.75 in embedment  $h_{ef}$ , 3/4, Steel galvanized, Hammer drilled installation per ESR-4143

## 7 Remarks; Your Cooperation Duties

- Any and all information and data contained in the Software concern solely the use of Hilti products and are based on the principles, formulas and security regulations in accordance with Hilti's technical directions and operating, mounting and assembly instructions, etc., that must be strictly complied with by the user. All figures contained therein are average figures, and therefore use-specific tests are to be conducted prior to using the relevant Hilti product. The results of the calculations carried out by means of the Software are based essentially on the data you put in. Therefore, you bear the sole responsibility for the absence of errors, the completeness and the relevance of the data to be put in by you. Moreover, you bear sole responsibility for having the results of the calculation checked and cleared by an expert, particularly with regard to compliance with applicable norms and permits, prior to using them for your specific facility. The Software serves only as an aid to interpret norms and permits without any guarantee as to the absence of errors, the correctness and the relevance of the results or suitability for a specific application.
- You must take all necessary and reasonable steps to prevent or limit damage caused by the Software. In particular, you must arrange for the regular backup of programs and data and, if applicable, carry out the updates of the Software offered by Hilti on a regular basis. If you do not use the AutoUpdate function of the Software, you must ensure that you are using the current and thus up-to-date version of the Software in each case by carrying out manual updates via the Hilti Website. Hilti will not be liable for consequences, such as the recovery of lost or damaged data or programs, arising from a culpable breach of duty by you.
